Hello!

Thank you for your interest in RobotCity Workshop! If this is the first you're hearing of us, RobotCity is a small science education shop in the Lakeview neighborhood of Chicago focused entirely on robots. Throughout the year, we run afterschool programs at many different schools throughout the Chicagoland area with the intention of spreading our love of robotics and sparking students' interest in technology at an early age.

We currently offer programming to students in pre-kindergarten through high school, divided by age to provide students with age-appropriate content. Our young learners and elementary school students build multiple robots with unique traits that they are able to take home with them for further experimentation, in addition to other hands-on learning activities. Each session of the class focuses on a different robot-related theme. Past topics have included the history of robots, alternative energy robotics, robots in space exploration, and inventions.

Our junior high and high school classes offer a more intensive building experience, in which students will build a single robot involving a higher degree of design and programming, learning about how the components function together along the way. All of our classes encourage students to be excited about applied sciences and engineering and send students home with robotic creations that they can be proud of having built themselves.

We are continuing to grow and expand, and would love to discuss implementing a robotics program at your school. We are always happy to work with your schedule and needs, and can be flexible with times, days, and length of the program. You can rest assured that students will learn something new and different every time they enroll in a RobotCity class, as we do change our curriculum with each session. While we've worked with some schools that requested to partner with us for a single season, the vast majority of our partnerships are ongoing, and we have had the pleasure of watching many of our students grow along with us. We hope to be able to welcome you to our RobotCity family soon.

Best,

Meghan Bongartz
Program Coordinator
